Liverpool,

England

UK

PROFILE

Experienced System Programmer with a demonstrated history of working in the banking industry. Skilled in IBM DB2, Databases. Strong information technology professional with a degree in Computer Studies studied in Liverpool John Moores University.

EXPERIENCE

DB2 System Programmer, Barclays UK — 2015 - Present

Working as part of the DB2 team I have gained vital experience using advanced SQL and JCL commands while working in a mainframe environment spanning across multiple centres globally. Working as a first point of support with any Db2 related problem, I have developed a working knowledge in incident, change and team management during my time at Barclays.

I also had the opportunity to establish the Mainframe Innovation initiative internally tasked with exploring the bleeding edge Mainframe technology on offer from our vendors in order to bring the optimal developer experience to our clients.

Key Responsibilities

- Maintain and develop the DB2 area of Barclays Mainframe environment
- Performance Monitoring of multiple Db2 HA/Standalone Systems
- Work with various different application team in order for their applications too efficiently and effectively use the mainframe platform
- Track and recovery any DB2 related incident that has been passed to the team
- Develop, Maintain and review various internal documentation
- Accurately preform development, testing and implementation when introducing any change to the production environment through orchestrated operational processes
- Preform regulatory audit processes and team governance

EDUCATION

Liverpool John Moores University, Liverpool — Computer Studies 2013 - 2017

Grade: 2:1

Whilst studying Computer Studies I was introduced to the fundamentals of computer programming. With many modules cover both technical skills and the social implications of computer, I was able to set the ground work for a deeper insight into the computer industry. With many web development aspects being covered I was able to develop a final year project which incorporated SMS technology with Emails through the use of an API.

SKILLS

IBM DB2	Proficient
System Architecture	Proficient
Continuous Deployment	Proficient
Mainframe/zOS	Proficient
Change Management	Proficient
Linux	Moderate
Full Stack Development	Moderate
